

The AI revenue manager for short-term-rental operators

Aria sets the profit-maximizing nightly price for every property, every night — and a human approves before anything goes live.

Raising **\$400–600K**
pre-seed

THE PROBLEM

Operators leave money on the table every single night.

A manager running 15–50 units faces hundreds of pricing micro-decisions a day:

- Which units need a price change today?
- Is this empty night an orphan gap, or a demand signal?
- Did a competitor drop rates from weakness, or a pricing error?
- Is the F1 weekend / festival already priced in, or not yet?

Today they juggle PMS dashboards + spreadsheets + WhatsApp + gut feel.

The result: stale pricing, missed gaps, slow event response — revenue leakage.

WHY EXISTING TOOLS FALL SHORT

Powerful, but black-box and global-first.

	INCUMBENTS	PRICEOS
Interface	Dashboards + sliders	Conversational (ask Aria)
Reasoning	Black box	Explained, every night
Local events	Generic	Market-native intelligence
Execution	Suggests a price	Propose !' approve !' sync to PMS
Trust model	"Trust the algo"	Human-in-the-loop, guardrails as code

They optimize for breadth across 100+ markets. They under-serve the operator who wants depth, explainability, and control.

THE SOLUTION

A decision board: See !' Decide !' Act !' Verify.

1 · Aggregate

Calendars, bookings, market rates & local events in one view.

2 · Propose

A price for every night, with a written reason and risk badge.

3 · Approve

Per-night or bulk. Nothing acts silently.

4 · Verify

Approved changes sync to the PMS and are confirmed.

You talk to Aria, your AI revenue manager. It does the analysis; you keep control.

The pricing engine is built and running.

- Deterministic 4-pass pricing waterfall — seasonality, rules, last-minute & gap strategy, with hard floor/ceiling guardrails (auditable math, not an LLM guess).
- Live elasticity + demand optimizer — learns each property's booking curve to find the revenue-maximizing price; confidence-weighted, safe with little data.
- Aria + specialist agents — conversational copilot that researches events, benchmarks competitors, and explains every decision.
- Hostaway integration — read-only today; one config flag from live price push.

This exists. I can demo it live.

WHY NOW

Three forces are converging.

Supply boom

STR inventory is exploding faster than operators can price it by hand.

Agentic AI

Finally good enough to explain pricing conversationally — the unlock for trust.

Open PMS APIs

Hostaway et al. make ingestion + execution feasible without friction.

Marketplaces

PMS app stores are a low-CAC channel that didn't exist before.

Early enough to win the category. Late enough that it actually works.

MARKET

UAE beachhead. Market-agnostic by design.

- Launch market: UAE — 25,000+ active STR listings (3× since 2022), 22M+ a willingness to pay. [cite source]
- Product is market-agnostic — engine + market templates are parameterized;
- Global STR — millions of professionally-managed units across thousands of PMs worldwide

TAM

Global pro-managed STR units × ARPU [size it]

SAM

Hostaway-connected operators [size it]

SOM

UAE pilot cohort, next 12 mo [size it]

BUSINESS MODEL

Per-unit SaaS, with a performance tier.

- SaaS per-unit / month ($[\$X/\text{unit}/\text{mo}]$), or a % of incremental revenue as a performance tier.
- Land: PM signs up units !' trial !' convert. Expand: more units + guest-inbox & analytics add-ons.
- Distribution: direct to PMs now !' Hostaway marketplace post first live client (low CAC).

Unit-economics thesis: if PriceOS lifts a 30-unit operator's revenue even a few %, the fee is a rounding error against the uplift !' strong ROI, sticky once used daily.

TRACTION & STATUS

Pre-revenue. MVP built and demo-ready.

- Pricing engine live — waterfall + elasticity optimizer, guardrailed.
- Aria conversational copilot + multi-agent research.
- Hostaway integration (read-only), multi-tenant, secured.
- Test-partner inventory validating the product in read-only mode.

Not yet: paying customers, measured revenue lift.

That gap is exactly what this raise funds.

3-month trials that prove revenue lift.

- 3-month structured trials with real UAE operators — shadow + read-only first, then live price push once validated.
- Measure RevPAR / occupancy / revenue lift vs. each operator's baseline, per unit.
- Backtest + shadow mode let operators see the delta before trusting it — fast trust, low risk.
- Success: demonstrable uplift on the pilot cohort !' case studies !' marketplace launch.

This de-risks the one thing that matters: does the engine make operators more money?

Founder-led trials !’ marketplace scale.

1 · Now

Hand-sold 3-month trials with design-partner operators in the UAE.

2 · On proof

Publish case studies; launch on the Hostaway marketplace for low-CAC inbound.

3 · Then

Expand markets (config-driven) + add PMS integrations.

Why we win the early operators: trust-first workflow + local event intelligence + risk-free evaluation. The exact operators black-box tools can’t convert.

TEAM

Founder-built. Funded to scale.

Ijas Abdulla — Founder. Built the MVP end to end (AI-leveraged): the pricing engine, agent system, security, and integrations.

This raise hires the team to scale it:

- Engineering hires — productionize the engine, ship integrations, on-call reliability.
- GTM / marketing (later) — drive trials and marketplace presence.

Shipping a full product solo with AI leverage is exactly the efficiency we're selling.

THE ASK

Raising **\$400–600K** pre-seed.

Use of funds (~[N] mo runway)

- ~[X]% Salaries / tech hires — engineers to productionize + reliability.
- ~[Y]% Marketing / GTM — drive trials + Hostaway marketplace launch.
- ~[Z]% Infra / data / ops — hosting, market data, compliance.

Milestones this unlocks (6–9 mo)

- 3–5 design-partner operators complete 3-month trials.
- Measured revenue-lift case studies on the cohort.
- First paying customers + Hostaway marketplace listing.

VISION

**Every operator, in every market,
runs revenue through an AI manager
they actually trust.**

PriceOS starts in the UAE, proves uplift with real operators, and rides the PMS marketplaces to global scale — with the human always in the loop.
